

To all partners and customers

Teningen, May 2017

## **Announcement**

### **Factory-installed connection terminals on LKT-type Power Capacitors**

Dear Partners and Customers,

For almost 20 years, we have been offering the AKD-type connection terminal as an option for our Power Capacitors. With the tried and tested Wago CageClamp® spring-tension mechanism, a simple, vibration-proof and maintenance-free connection to the capacitor can be realized.

Effective July 1, 2017, we will equip each LKT Power Capacitor with the appropriate connecting terminal.

This gives you the following advantages:

- Only one order number for the capacitor (order numbers will remain)
- Simplification of logistics
- Reduced effort during installation and connection of the capacitor

The factory mounting of the AKD terminals also prevents possible failures which may result from incorrect mounting of the AKD on the capacitor.

In case of any further questions or requirements please do not hesitate to contact us.

Thank you for forwarding this important information to other responsible departments in your company.

Thank you for your confidence in us. We look forward to our continued collaboration.

With best regards,

FRAKO Kondensatoren- und Anlagenbau GmbH
