EMF 1102 Cost Centre and Alarm Unit

4

The EMF 1102 is a compact and cost-effective system for the acquisition of meter readings, switching status and alarm signals.

Description

It consists of a data acquisition and memory unit plus modular software components for easy user configuration and for the evaluation and management of the data.

Data acquisition for all types of utility such as electricity, water, gas, compressed air or meter pulse inputs via an S0 interface (= digital inputs).

- Calculation of power, energy and flow rates
- Monitoring of power, energy or flow rate with high and low alarm settings
- Determination of running time and downtime for each channel (running time meter)
- Operating cycle counter
- Monitoring of running times and downtimes with alarm settings (e.g. to detect instrument failure)
- Monitoring of key operating conditions
- Connection optionally with RS-232 interface adapter (optional) or via COM server directly to PC – or via FRAKO Starkstrombus to the PQM
- Option of visualising and evaluating the meter data via the FRAKO Energy Management System software module (EMVIS 3000)
- Option of displaying, configuring and evaluating the recorded data via the PC by means of the EMF-SW cost centre and alarm software EMF-SW (optional)
